

Onyeocha Keside Olatunbosun

Lagos, Nigeria | [linkedin.com](#) | [github.com](#) | +234 8141902806 | onyeocha.keside@gmail.com

Core Technical Skills

Languages & Frameworks: Python (Pandas, NumPy, Scikit-Learn, XGBoost, LightGBM, PyTorch, TensorFlow), C++, SQL

Statistical & Analytical Methods: A/B Testing, Causal Inference, Hypothesis Testing, Time-Series Forecasting, Statistical Modeling, Demand Prediction, Cohort Analysis

Software & Infrastructure: Git, REST APIs, FastAPI, Docker, AWS (SageMaker, S3), GCP (BigQuery), CI/CD, PostgreSQL, Terraform, System Design

AI/ML: LangChain, RAG Architectures, Multi-Agent Systems, Hugging Face, Reinforcement Learning, Computer Vision, TinyML

Data Tools & Visualization: SQL, Pinecone, Qdrant, Vector Databases, Tableau, Matplotlib, Seaborn, Excel (Advanced)

Professional Experience

[Doheney Services \(Remote/Parttime\)](#)

Data Scientist & ML Product Engineer | September 2025 – Present

- Engineered intelligent desktop productivity system processing 10K+ activity events daily with real-time classification achieving 90%+ accuracy and <100ms latency, reducing reported burnout symptoms by 30% through automated break optimization and energy prediction
- Built predictive focus analytics engine using TensorFlow, learning individual ultradian rhythms from 2+ weeks of behavioral data to identify peak performance windows and deliver personalized productivity insights via weekly heat map reports
- Designed and executed A/B testing framework to validate productivity intervention strategies, analyzing statistical significance across 200+ user sessions using hypothesis testing and confidence intervals to measure impact on focus duration and task completion rates

[JeGO, USA \(Remote\)](#)

Data Scientist & Software Engineer (AI/ML) | November 2024 – October 2025

- Designed solar tracking algorithm using astronomical optimization achieving 34.5% efficiency improvement over static positioning through real-time sun path prediction
- Architected unified 3-phase Agent RAG system consolidating customer service, booking, and analytics into single codebase, eliminating need for specialized systems
- Designed autonomous navigation system for gated communities implementing SLAM algorithms and sensor fusion for realtime obstacle detection and localization
- Developed delivery route optimization engine simulating last-mile logistics for food delivery platforms using vehicle routing algorithms (VRP) and real-time demand prediction, achieving 22% reduction in average delivery time through multi-objective optimization balancing speed, cost, and customer satisfaction
- Built AI-powered customer service chatbot with EV booking integration, implementing caching strategies and query optimization for sub-second response times

[Sanctum, Nigeria](#)

ML Research Engineer | April 2024 – October 2024

- Architected RAG pipeline with hybrid retrieval strategies (dense + sparse) and vector database integration using Pinecone, improving search relevance by 40% across production knowledge bases
- Developed multi-agent orchestration framework automating end-to-end task workflows, reducing manual processing time by 60% through coordinated agent communication and dynamic task routing
- Conducted rigorous hypothesis testing and statistical analysis to validate RAG architecture improvements, measuring 40% lift in search relevance through paired t-tests and bootstrapped confidence intervals across 5,000+ query samples
- Led 10+ internal technical sessions on advanced RAG architectures and multi-agent systems for engineering teams of 15+, establishing standardized development practices adopted company-wide

NITDA IT Hub, Lagos, Nigeria

Machine Learning Engineer | May 2023 – August 2023

- Developed native language dataset for keyword spotting applications, achieving **95%** model precision through **data augmentation** and **active learning techniques**
- Designed and implemented data validation pipelines ensuring dataset quality standards, reducing model training errors by 40% through automated quality checks, outlier detection, and annotation consistency verification
- Optimized TensorFlow model performance using **quantization** and **pruning techniques**, reducing inference error rates by **85%** while maintaining accuracy
- Contributed to **TinyML** project optimization, reducing **hardware** requirements and production deployment costs by **70%** through efficient model compression

Leadership & Community Impact

Cave.AI Hub, University of Nigeria

Founder and President | January 2024 – July 2025

- Established AI development community with **50+** active members, creating structured learning curricula and hands-on project opportunities
- Organized monthly technical sessions on Retrieval Augmented Generation architectures, consistently drawing **40+** participants from across Nigeria's tech ecosystem
- Led hackathons and AI competitions focused on practical applications, providing mentorship and project guidance to emerging ML engineers

Research & Publications

Independent Research — Reasoning-Augmented Autonomous Driving: Integrating LLM-Based Perception and Decision Pipelines for End-to-End Vehicle Control (2025 – Present)

Professional Development

- **Fellow, Fellowship AI, San Francisco** | January 2023 – April 2023 Advanced AI research program focusing on cutting-edge machine learning applications and industry best practices
- **Microsoft Responsible AI Hands-on Session** | June 2023 Technical workshop series on ethical AI development frameworks and bias detection methodologies

Education

University of Nigeria, Nsukka B.Eng in Electronics and Computer Engineering

Relevant Coursework: Digital Signal Processing, Computer Vision, Machine Learning Systems
